## Error in Winqt2

One brother had sent me one email about error in my calculation. He had used the text of Quran in WinQt2 software. The arabic text of Quran in this software has many problems. This software is good for translation but its text isn't reliable. He claimed that there are 134 verses include DbI Noon (نن) not 133 (19\*7) .

I checked verse by verse of winqt2 software with my database of Quran. Finally I found the error in Winqt2. The error was in verse 39:64. This software had wrritten the word **Ta'amoronni** ( ) with two Noon instead of One Noon.

For getting the true text of Quran in Arabic please refer to part "database of Quran".

قُلْ أَفَغَيْرَ اللَّهِ تَتَأْمَرُونَني أَنْ أَعْبُدَ أَيُّهَا الْجَاهِلُونَ ﴿١٤﴾

[٣٩:٦٤] Say, "Is it other than GOD you exhort me to worship, O you ignorant ones"?

GOD is glorified!!

We know that there are 133(19\*7) verses having DbI Noon(نن). If GOD had used this word with two Noon, all verses that had dbI Noon were 134 that wasn't divisible by 19.

GOD has signed this verse too. Because GV of verse 39:64 is **2413** (**19\*127**). If that word was with DbI Noon; The GV of verse wasn't divisible by 19.

GOD is glorified!!

Praise be to God Lord of the universe.
